Major improvements needed. No Building Labels, so I did not know what building did what. Also, I could not actually find a keybindings list of how to play. I can only move around the map. 99% of the time you're just figuring out what to do. NEEDS LABELS.. it's ok not enough depth. Way too slow. Building anything takes forever. Every enemy unit/building has a million hp and your units do no damage. You control one unit who has to do EVERYTHING: gathering resources, building, researching tech, reloading towers, deploying armies, launching missiles, repairing, etc. For each of those, you have to physically go to that building, pause the game, access the control hub for that building, and then do it. And it even pauses if you try to alt-tab to do something else while you wait for e.g. a building to finish. Also, info about units and structures is severely lacking. It feels like the sort of game you'd create in a college programming course. Should've gone in early access at least to get feedback from people.

A new update : You can now see the label of the building by hanging mouse over it .. a new update released : Encounter mode and online mode have been added to the game.. A new update : Detailed Tutorials were added.. A new update released. : 1. Now you can move map in non-suspended state by pressing W,S,A,D key while holding Shift key. 2. Resource harvesting efficiency has been greatly improved and tempo of the fight also has been markedly accelerated. 1. ShiftWSAD 2.
